Item #6

Abstract Of The Disclosure

It is said that all things in our universe are linked and a disturbance at any point will reverberate and effect all other constituent elements. This statement may be refuted in the real world, but in the digital world of DRYBEDOC it is fact. The nature of DRYBEDOC links every part of every communication in a manner that if one pixel is tampered with it will reflect to the knowledgeable user. Encryption is used to alter messages so that intruders can not decypher the message. All encryptions have been solved. Files that are intercepted by the unauthorized must be created so that the critical data can not be decyphered. DRYBEDOC allows information to be transmitted in non-critical data that contains DRYBEDOC embedded data. DRYBEDOC embedded data can not be decyphered without access to the references used in message preparation.
